

PICTURING SCIENCE

SCIENCE IN ACTION

FELICE FRANKEL

KNOW
SCIENCE AND THE WORLD AROUND US

Felice at age eight

BORN AND RAISED IN: Brooklyn, New York

HOBBIES: Music, cooking

IF FELICE WASN'T A PHOTOGRAPHER, SHE'D BE: A pianist. Music is very important to Felice.

WORDS OF WISDOM: "Leave every door open. I had no idea that I might be good at photography until I tried!"

Felice Frankel sees science everywhere. "When you pour milk into coffee and see it swirl, that is science," she says. "Science is very beautiful. I want my pictures to catch peoples' attention."

Felice is a photographer who works with scientists. She helps them find ways to show their work in pictures. Often Felice takes pictures of things that are so small she must attach her camera to a microscope.

When she was a child, Felice remembers paying attention to small things. "I'd rip apart leaves and look at them with a magnifying glass," she says. Felice studied biology at university and worked for a while in a research lab. When she was 23, her husband bought her a wonderful gift — a camera. Felice taught herself to take photographs and found she was very good at it.

Photo caption to come...

Today, Felice combines her love of science and of art. Her work has appeared in many science journals. These are magazines where scientists tell people about their discoveries. "My pictures help tell part of the story, too," says Felice. "My hope is that when people see my pictures of science, they will want to ask questions."
